

WINTER WILDLIFE TIPS

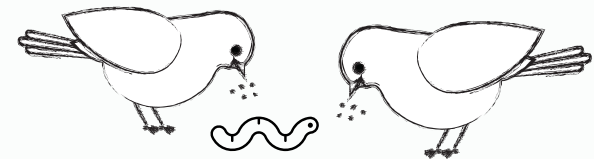

1 LET YOUR GARDEN GO WILD!

Piles of leaves or twigs can make the perfect cosy nest in which insects, frogs and small animals can hide, rest and hibernate in the colder months.

2 FEED THE BIRDS

Birds may find it difficult to source natural foods during the cold season. To attract a range of garden birds provide a selection of seeds, fat balls, suet and dried fruits or insects.

3 PROVIDE FRESH WATER

Water is vital for all wildlife from bees to birds to mammals. A shallow dish or container of water at ground level is great as well as a bird bath if you can.

4 BREAK THE ICE!

Frozen water can cause problems for wildlife so make sure you break the ice of your bird baths or drinking sources and refill them with fresh, clean water.
